[GI/IMIB/C060/2011] - INMUNIDAD, INFLAMACIÓN Y CÁNCER

OBJETIVOS

1. Enfermedades inflamatorias crónicas: estrés oxidativo
2. Enfermedades infecciosas: inflamasoma
3. Papel del inflamasoma y la inflamación en hematopoyesis
4. Identificación de nuevos marcadores de diagnóstico y pronóstico para enfermedades inflamatorias e infecciosas
5. Identificación de nuevas dianas terapéuticas para enfermedades inflamatorias e infecciosas
6. Papel de inflamación e inmunidad en melanoma
7. Disruptores endocrinos: EE2, BPA, etc.

Área: **6**
Línea: **2**
Grupo: **[GI/IMIB/C060/2011]**

- INMUNIDAD, INFLAMACIÓN Y CÁNCER

PROYECTOS

1. “Impacto del estrés oxidativo en las enfermedades inflamatorias crónicas y el cáncer de piel” (BIO2014-52655-R) Plan Nacional I+D, MINECO. Enero 2015-Diciembre 2017. Investigador responsable: Dr. Victoriano Mulero Méndez. Cuantía: 411.400 €.

PUBLICACIONES

The screenshot shows the PLOS Pathogens website. At the top, there is a banner for "Research Matters" with the tagline "Scientists share why basic research in their field matters". Below the banner, the PLOS logo and "PATHOGENS" are visible. Navigation links include "Browse", "Publish", "About", "Search", and "sign in". A search bar has "advanced search" options. The main content features a green fluorescence microscopy image of a zebrafish embryo. Below the image, the date "June 28, 2016" is shown, followed by the title "TNF α Impairs Rhabdoviral Clearance by Inhibiting the Host Autophagic Antiviral Response" and the author "Victoriano Mulero and colleagues". A small credit line at the bottom right says "Image credit: Espín-Palazón R, et al. (2016)".

PUBLICACIONES

The screenshot shows the homepage of the *Nature Communications* journal. At the top, there is a navigation bar with links for Home, About the journal, Authors and referees, Browse archive, and Search. To the right of the search bar are links for Login and Cart. Below the navigation bar, there is a brief description of the journal: "Nature Communications is an open access journal that publishes high-quality research in biology, physics, chemistry, Earth sciences, and related areas." It includes a "Read more" link and a search bar with a "GO" button. To the right, there is a "Submit to Nature Communications" button. The main content area features a "Most recent" tab and a "Browse by subject" tab. Under "LATEST ARTICLES", there is a thumbnail image of a zebrafish embryo with green and red fluorescence. The article title is "Neutrophils mediate *Salmonella* Typhimurium clearance through the GBP4 inflammasome-dependent production of prostaglandins" with an "OPEN" access link. Below the article, there is a brief summary: "The role of guanylate-binding proteins (GBPs) in innate immunity is increasingly recognized. Here the authors show that GBP4 activates inflammasome in zebrafish neutrophils, and that this process is critical for the clearance of *Salmonella* infection via prostaglandin D2." The date is 01 Jul 2016 and the doi is 10.1038/ncomms12077. The article is categorized under Biological Sciences and Immunology. Further down the page, there is another article abstract: "Gas-solid interfacial modification of oxygen activity in layered oxide cathodes for lithium-ion batteries" with an "OPEN" access link. The journal services section includes links for Sign up for e-alerts and Web feeds. The personalized content section allows users to choose their interests from a dropdown menu (Microbiology) and lists three recent articles: 1. A rhesus macaque model of Asian-lineage Zika virus infection (OPEN), 2. Alterations of the human gut microbiome in multiple sclerosis (OPEN), and 3. A key genetic factor for fucosyllactose utilization affects infant gut microbiota development (OPEN).
